

## Delta ModTech® Machine Intelligence Increases Productivity

Delta ModTech gives businesses the flexibility to coat, convert and pouch a variety of complex products on one manufacturing system. In this demonstration, we will manufacture a complex medical part using various converting techniques. The part will then be pouched inline on our heat seal packager. The final part will pass through vision inspection using our intuitive MOD-TRACK™ vision software. MOD-TRACK™ puts vision setup in the hands of the operator with easy to set constraints. Less custom programming speeds up the time-to-market for contract manufacturers and converters with frequent changeovers.

The machine is controlled by the INTELLI-MOD™ control system through a user-friendly HMI touchscreen. This system offers high speed precision with minimal material waste, the perfect solution for applications where expensive materials and drugs need to be accounted for.

In addition we will feature EDGE® Laser Technology and a Frontier Mobile Coat portable slot die station at Pack Expo in stand S-3971, be sure to stop by and find out how Delta ModTech can help you with your converting, cutting, coating and heat seal pouching needs.

Delta ModTech offers manufacturing solutions for a variety of complex medical, pharmaceutical, label, security, RFID, packaging and cosmetic products. The Delta ModTech system is custom designed and engineered to meet your application requirements, improve your profitability, and reduce your risk.
